PANGASINAN STATE UNIVERSITY

	Last Name	First Name	Ext. Name	M.I.
Full name:	**IGNI**	**KATHERINE**		**R.**

Course, Year and Section: BSIT-WMT 4-2 **Date: 09/11/26**

Instructor: Jackson S. Soriano, MIT

1. **A short reflection the challenges and learnings in accomplishing the exercise.**

While accomplishing this exercise, I learned how to organize data using lists, dictionaries, and tuples. I also learned how to use split to separate comma-separated records, list slicing to get the score fields, and built-in functions such as sum, len, max, and min to process the grades.

One challenge I experienced was understanding how the dictionary, tuple, and list structures work together. I also had to be careful with invalid records and numeric conversion. Using guardian conditions, continue, and try-except helped me understand how a program can handle errors without stopping completely.

Overall, this exercise helped me understand how Python can parse, organize, calculate, sort, and display data in a structured way
